MILLARD HENNY

159-B

BROOKS, OREGON

FALL 1952

SPRING 1953

We invite your personal inspection of our nursery any time you are traveling Pacific Highway 99. Watch for our sign 10 miles north of Salem, 40 miles south of Portland.

Not only will you be able to see the newest in camellias and azaleas blossoming in our plantings, but will be able to select personally from a large stock of true to name, disease free, quality grown plants. Our selection of varieties will please the most discriminating.

Telephone: Gervais 2344

General Information

September 1952 — September 1953

All quotations in this catalogue are f.o.b. Brooks. Unless stipulated otherwise, shipments will be sent parcel post c.o.d. We make special effort to plan their arrival so as to avoid any possible weekend or holiday delay. Remember our 10% REDUCTION ON ORDERS OF \$10.00 OR MORE.

Cash with those orders to be shipped immediately, and 20% of purchase amount will be required to reserve plants for later delivery. All rooted cuttings will be shipped in June and July. Plants under the group headings and azaleas, rhododendrons, and other shrubs will be sent upon receiving order.

Sizes quoted in camellias refer to height of plant—in azaleas they refer to spread of plant. Rhododendrons and Mollis azaleas are graded according to height and corresponding spread.

Sizes and prices of any specific varieties in larger stock than listed will gladly be quoted upon request.

May we remind you to plant camellias, rhododendrons and azaleas only as deep as grown in the nursery. Addition of moisture-saving peat moss, deep watering during summer months, fertilizer after blossoming season, hand cultivation only, are suggestions to those unfamiliar with the growing of these plants.

Plant rooted cuttings in a shady spot using a good peat mixture and water freely during summer. By fall they can be moved to your desirable location.

Williamsii Hybrids

saluenensis and japonica cross

These award winning British camellias are known for their free flowering habit, their hardiness to zero temperatures, and this unique characteristic—the blossoms will fall when mature. The plants are never marred by faded flowers. Buds will appear in profusion, even on small plants, at the terminal points and also along the central stems. They open successively over a long period of several months. These camellias are easy to grow and shape themselves well.

Camellia **J. C. Williams** is full pink in bud and pale rose-pink when expanded. The petals, generally 6 to 8, each wavy and notched in the center, open widely to about four inches across and are centered with a tuft of prominent yellow stamens. The foliage is small and narrow.

Equally desirable **Mary Christian** is a deeper, brighter rose-pink. Its buds are beautifully long and pointed. In form the blossoms are similar to J. C. Williams, but remain more cup shaped when open. Petals may be fewer, neither as prominently notched nor as wavy. Begins to bloom in December.

Rooted cuttings available in June \$2.00

Immediate shipment

One year own root \$3.00

Two year own root, branched and
budded \$7.50

GROUP ONE

The majority of the following camellias are lath grown, with the exception of a few varieties grown in cans. In the event we are out of the exact size ordered, we may send next size but will not substitute variety unless suggested by the customer. If you are interested in larger size plants of any variety, please inquire. We will be glad to quote sizes and prices of any stock available.

Rhododendrons

This season we are offering some additional companion shrubs for your landscape plantings. Rhododendrons and Andromeda thrive in the same general growing atmosphere as do the camellias and azaleas and require the same care. We promise the same quality grown stock that you have known in our camellias and azaleas.

Plant evergreen shrubs that bloom!

Stars indicate official quality ratings. 4 stars denote top rating. Some varieties are too new to be rated.
